

Enzymes Plus

- Ease gastric distress
- Improve digestion in the stomach
- Increase absorption of nutrients

How Enzymes Plus Works:

Each tablet is divided into two parts: Gastro-active and Enteric-active. The gastro-active ingredients are the betaine and glutamic hydrochlorides which are released in the stomach, increasing the acidity, which helps the digestive process.

The pancreatic enzymes are enteric coated with a cellulose compound to insure proper release in the small intestine. The enzymes are needed to help complete digestion and to promote complete absorption of nutrients.
