

Honey Hydrating Masque

Skin Care From Time Labs

With Papaya and Yucca extracts.

The Monolaurin fights bacteria, virus and fungus infections.

This lush, creme masque can be left on for hours while your skin comfortably receives a boost of nutrient-rich, healing agents from papaya fruit, wild yam root, grapefruit seed, and yucca extracts that dissolve dead skin cells, decongest clogged pores, and purify the skin. This cream is especially effective for depleted, dehydrated, imbalanced, dull, flaky, congested, coarsely textured, dry or oily skin conditions.

A prominent hydrator in this masque, honey is one of nature's most efficient moisture attracting humectants. It is widely regarded for its ability to plump the skin, allowing deeper absorption of essential amino acids, vitamins, and other nutrients that assist skin firming.

Sunflower seed and grapefruit peel oils are deeply penetrating emollients and lubricants that reduce skin inflammation, soothe and soften, and help strengthen capillaries and maintain tissue elasticity.

Recommended Use: follow the Application Directions. For best results, the Honey Hydrating Masque should be left on for 1 hour, preferably several hours or overnight.

Application Directions:

Recommended a minimum of twice per week, alternating with a different moisture masque.

First, cleanse and thoroughly rinse the skin with warm water (using hot water can sensitize the skin). Smooth a generous amount of moisture masque to entire face, avoiding eye area. For extended benefits, also smooth over the neck.

Leave on the recommended time for each particular masque. Then rinse with tepid water, pat dry and apply a nourishing moisturizer.

Caution: The moisture masques contain high levels of bio-active ingredients. The masque sensations are designed to be a pleasant experience. If irritation occurs, discontinue use.

For Inside-Out results, use with Opti-Monolaurin
