

# Sarsaparilla

- Sarsaparilla has been shown to clear up psoriasis and other skin disorders.
- It has been used for arthritis and auto immune disorders.

From 1820 to 1910 Sarsaparilla was registered in the US Pharmacopoeia as a treatment for syphilis, and more recently it has been used for arthritis, eczema, herpes, leprosy, psoriasis and other problems. It has been used for Pain relief. But there is no research to support these claims. There is research suggesting it has anti oxidant properties.

Properties and actions that have been documented by research: anti inflammatory, anti bacterial and anti fungal, blood cleanser, and detoxifier. It protects liver cells and selectively reduces over active immune function. It is neuro protective.

Cautions: excessive doses can cause gastrointestinal irritation.
