

Ultra-CoQ10 100

Ultra CoQ10 100 is an outstanding Anti-Aging supplement

- It may improve many conditions associated with aging
- It provides convenient dosage when larger amounts are required as in congestive heart failure and neuropsychiatric conditions

Coenzyme Q10 is a vitamin-like compound that occurs naturally in our bodies. It is also known as ubiquinone, a naturally occurring anti oxidant necessary for energy production. It is an integral part of the immune system, and an essential component of the membranes of mitochondria. CoQ10 status may be adversely affected by treatment with certain cholesterol-lowering drugs (statins), beta blockers, tricyclic antidepressants and phenothiazines.

What Coenzyme Q10 Is Used For:

CoQ10 has been shown to improve many conditions associated with aging. As body levels decrease, so does the general health status of the individual. It is an essential component in anti-aging nutritional support. Some overweight people have low levels. Deficiencies are most likely to occur in tissues that need a high energy level such as heart muscle, periodontal tissue, and the immune system.

Published data has shown that low levels of CoQ10 may be found in:

angina	depression	hypertension
high blood pressure	heart disease	diabetes mellitus
compromised immune system	lack of energy	infertility

Patients with cardiomyopathy and congestive heart failure have shown dramatic improvement when given CoQ10 in doses from 50 to 150 mg daily.

What is Ubiquinol?

Ubiquinol is a potent antioxidant that helps recycle vitamins C and E. When ubiquinol is completely oxidized it is known as ubiquinone. Both ubiquinone and ubiquinol have uses in the cell. The body keeps them in a state of balance. They are stored in different portions of the cell membrane. No matter which supplement form is used, it can be quickly converted to the other form as needed to maintain the proper balance of the two forms.
